

TECHNIDATA launches TD-Patient™, its innovative solution for consulting laboratory results online

Montbonnot, October 11, 2011: TECHNIDATA, the supplier of software for clinical and anatomic-pathology laboratories, has enriched its suite of TD-Synergy software to allow patients to consult their laboratory results online with TD-Patient.

Saving time, reducing operational costs and increasing patient convenience

TD-Patient allows patients with an internet connection to consult, print or download their results at home. Downloaded results can be kept in PDF format for the patient's own personal records.

With this new module, patients can access their results quickly and securely using a unique login and password which guarantee the confidentiality of their medical information. Moreover, the results are only accessible for a limited period of time, from a few hours to a few days, and the result reports are available only for the patients who requested to access them online.

By using TD-Patient, laboratories can reduce printing and mailing costs, and save time by reducing the number of patients who call to find out their results. Patients also save time by using a much more convenient method to obtain their results which no longer requires them to return to the laboratory.

A continual improvement strategy

Improving the quality of care and matching its solutions to market needs have always been among TECHNIDATA's major priorities. TD-Patient is the company's response to the changes in technology and communication habits.

"Thanks to the internet, it is easier than ever to get information, and patients now have a more proactive approach to their own care and diagnosis, for which laboratory results are an essential part of the clinical check-up process. The internet has also changed people's habits, so being able to access laboratory results online, just as you can check your bank account online, is a natural development and one that is really demanded by patients. This type of service is likely to become indispensable for laboratories in the near future." says Charlotte Latron, Product Manager at TECHNIDATA.
